MARKET	COMPETITION	B. MODEL	FINANCIAL
09	10	11	12

03 **MISSION**

CONTRIBUTION

SPRYFI protects liquidity providers (LPs) from impermanent loss by using a smart dynamic fee model in decentralized exchanges.

IMPACT

Increases LP confidence, attracts more liquidity, and improves DeFi market stability and efficiency.

04 **PROBLEM**

ONE

LPs in decentralized exchanges lose money due to impermanent loss caused by price swings.

TWO

This risk discourages liquidity provisioning, leading to thin markets and high slippage.

THREE

Impermanent loss can reduce LP earnings by a significant percent during volatile periods.

05 **SOLUTION**

DYNAMIC **FEE MODEL**	Fees adjust automatically based on price volatility low fees in stable times, higher when risk rises.
UNIFORM **LIQUIDITY POOL**	All liquidity is pooled together, reducing slippage and increasing capital efficiency.
MITIGATED **IMPERMANENT LOSS**	Significantly reduces potential LP losses during volatile market swings.

*Fees range dynamically between 0.3% and 5.5%, maximizing LP benefits.

06 **SERVICE**

FEATURES

- A fork of Uniswap V2 with smart, adaptive fee calculations and uniform liquidity.
- LPs add assets as usual but benefit from reduced losses.
- Traders enjoy fair, competitive fees and efficient swaps.
- No disruption to existing DeFi workflows easy integration and user experience.

07 TECHNOLOGY

- Novel fee adjustment algorithm tied to impermanent loss severity.
- The algorithm uses price change intervals to increase fees during risky trades smartly.
- Strong defensibility because of complex math and integration with proven Uniswap code.
- First-mover advantage in practical IL mitigation with dynamic fees.

08 WHYNOW?

HOW IT USED TO BE?

- Traditional AMMs like Uniswap V2 used static fees regardless of market volatility.
- Impermanent loss was largely unaddressed, causing liquidity providers (LPs) to face unpredictable losses.
- Liquidity providers had to choose between risky returns and lower participation.
- Previous solutions like Bancor's IL protection were partial and complex, limiting market adoption.
- Market growth was slower due to LP hesitation and inefficient fee models

THE NEW WAY!

- Introduction of dynamic fee models, adjusting fees in real time based on price volatility and impermanent loss risk.
- Uniform liquidity pools aggregate capital for better efficiency and less slippage.
- Liquidity providers now gain active protection against impermanent loss, increasing their confidence and returns.
- Technology readiness and market maturity enable practical deployment of sophisticated adaptive models.
- Growing DeFi volumes and trader sophistication demand smarter, fairer AMM mechanisms Spryfi meets this urgent need.

09 **MARKET OVERVIEW**

TARGETS

LPs on Ethereum and compatible chains looking for safer returns

Growing interest from both retail and institutional liquidity providers

Market expanding fast with strong CAGR* and bright future prospects

Multi-billion-dollar daily trading volume across Ethereum DEXs

* **CAGR: C**ompounded **A**nnual **G**rowth **R**ate

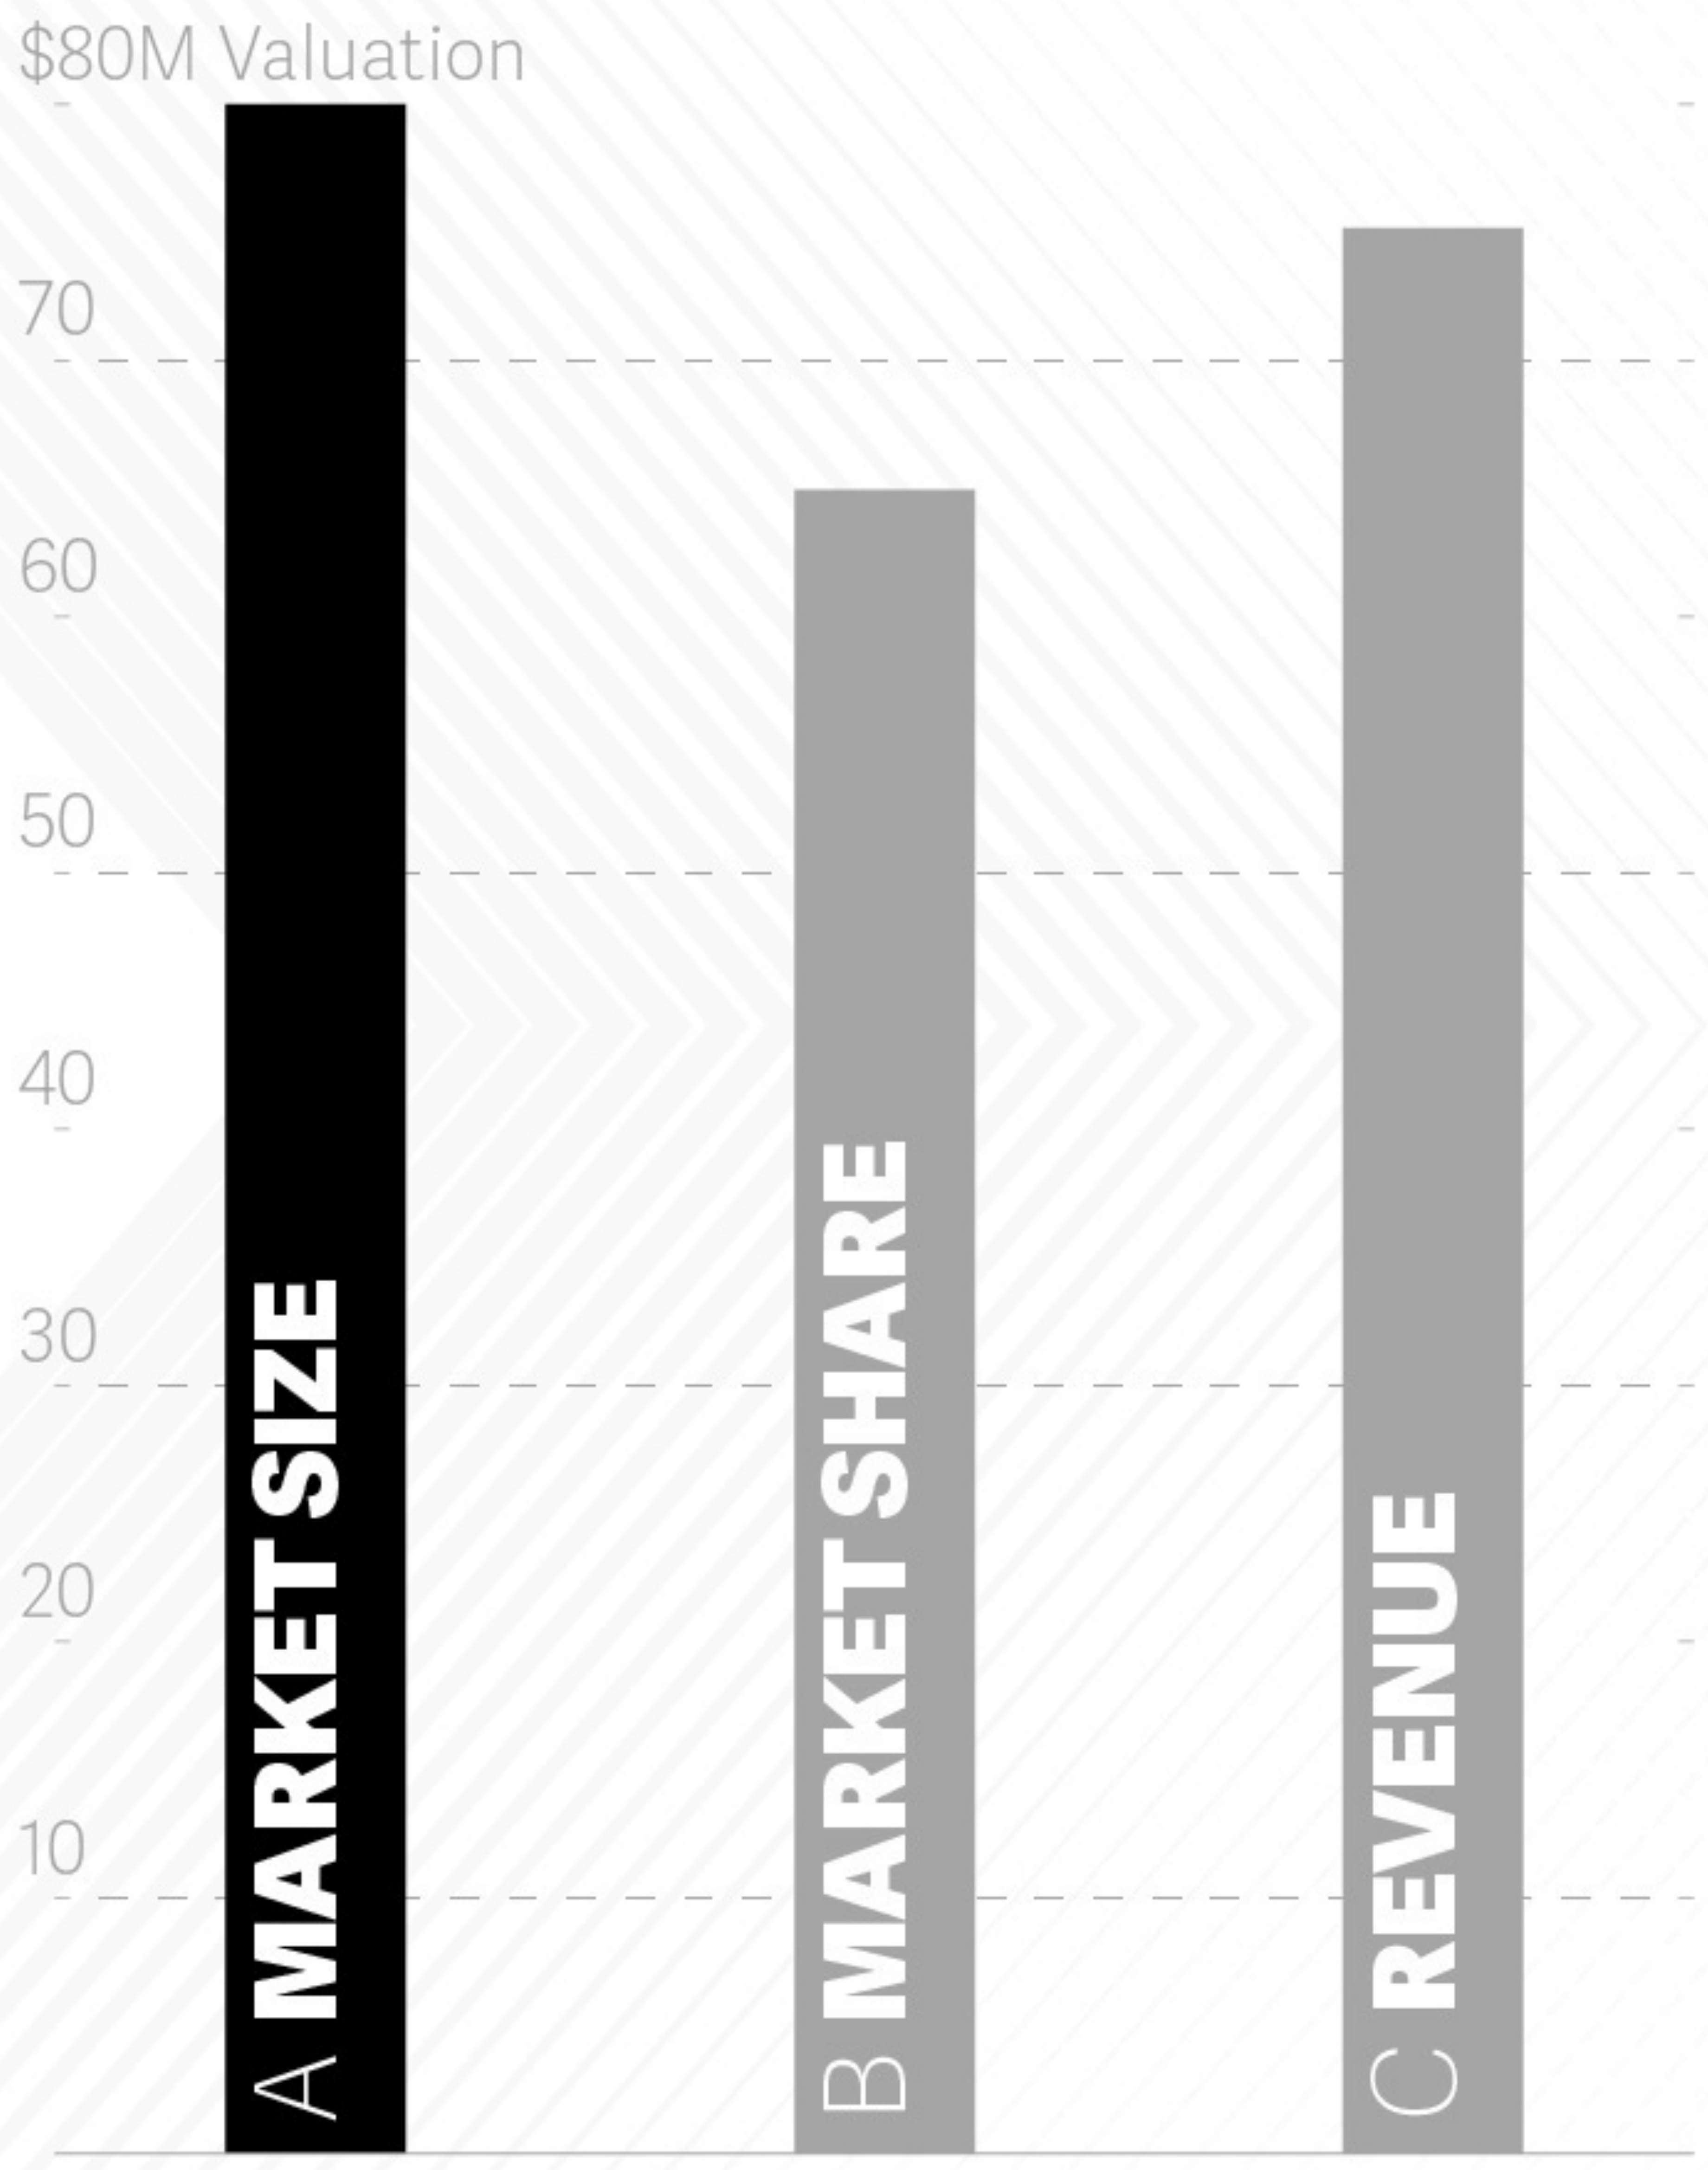
09 **MARKET OVERVIEW**

A **MARKET SIZE**

- Decentralized exchanges (DEXs) on Ethereum process multi-billion-dollar daily trading volumes.

- The total addressable market (TAM) for AMM protocols like Spryfi is in the multi-billion USD range.

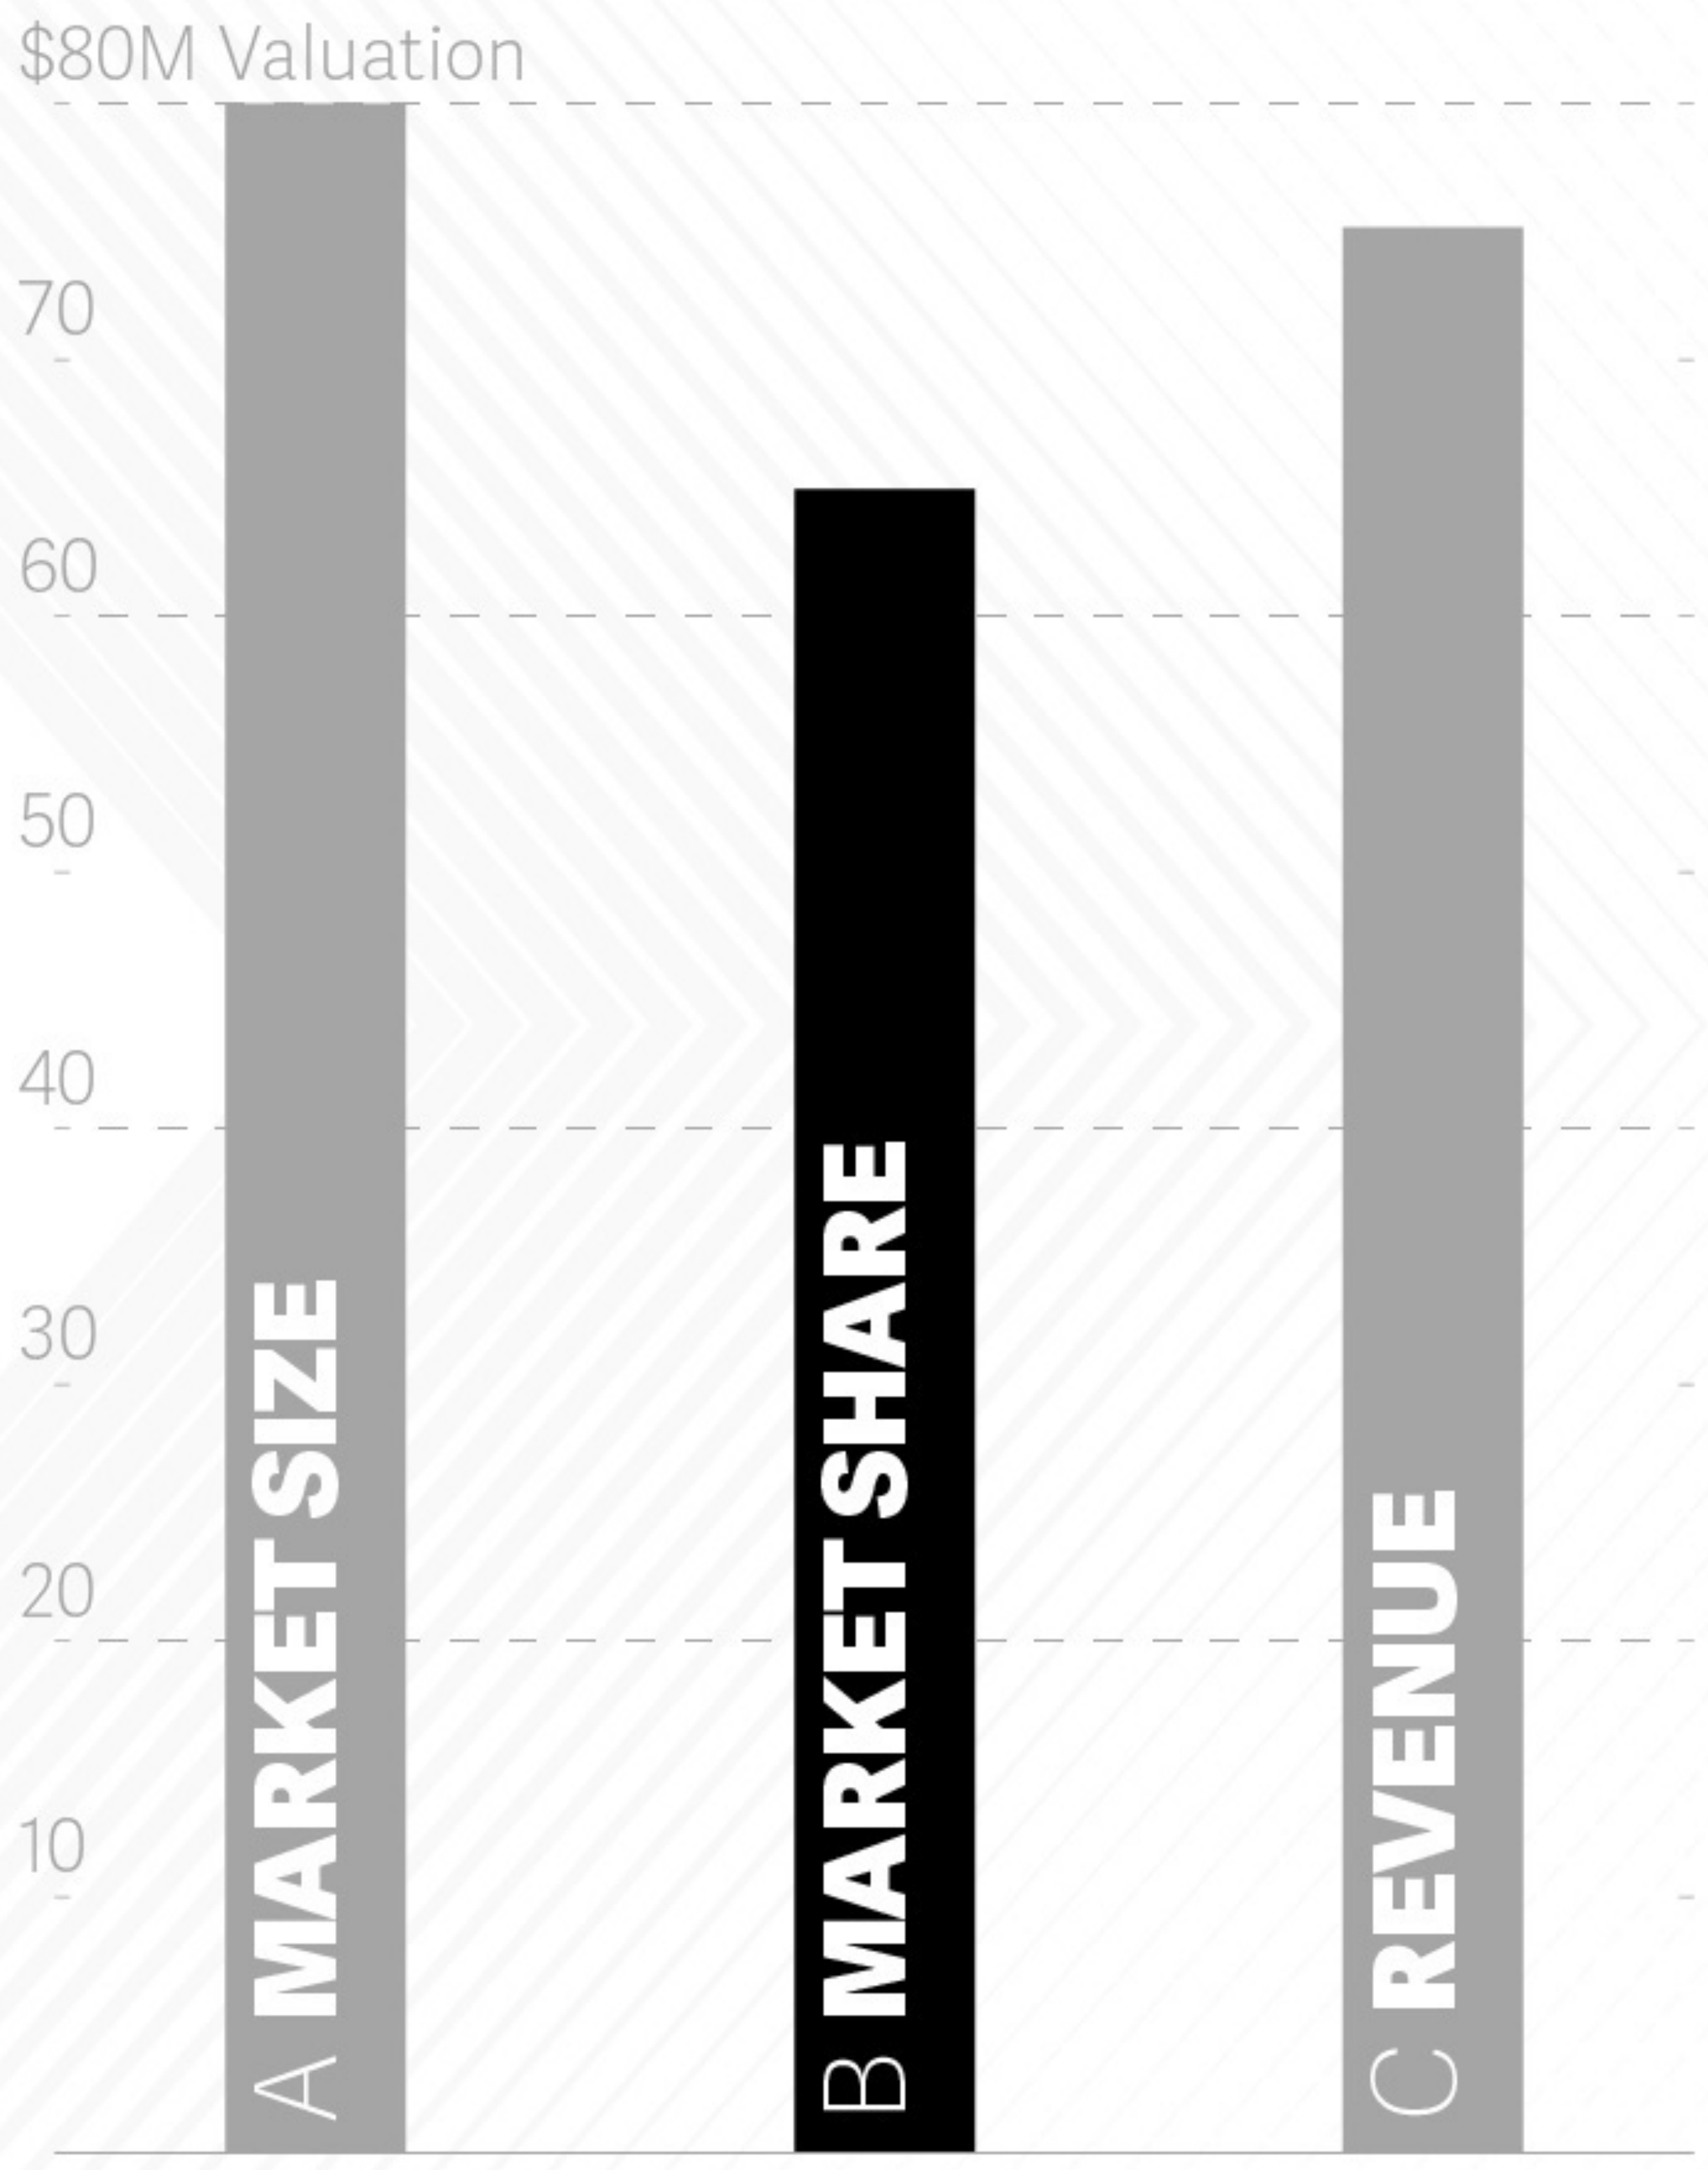
- The DeFi ecosystem is rapidly expanding, supported by a strong CAGR.



09 **MARKET OVERVIEW**

B **MARKET SHARE**

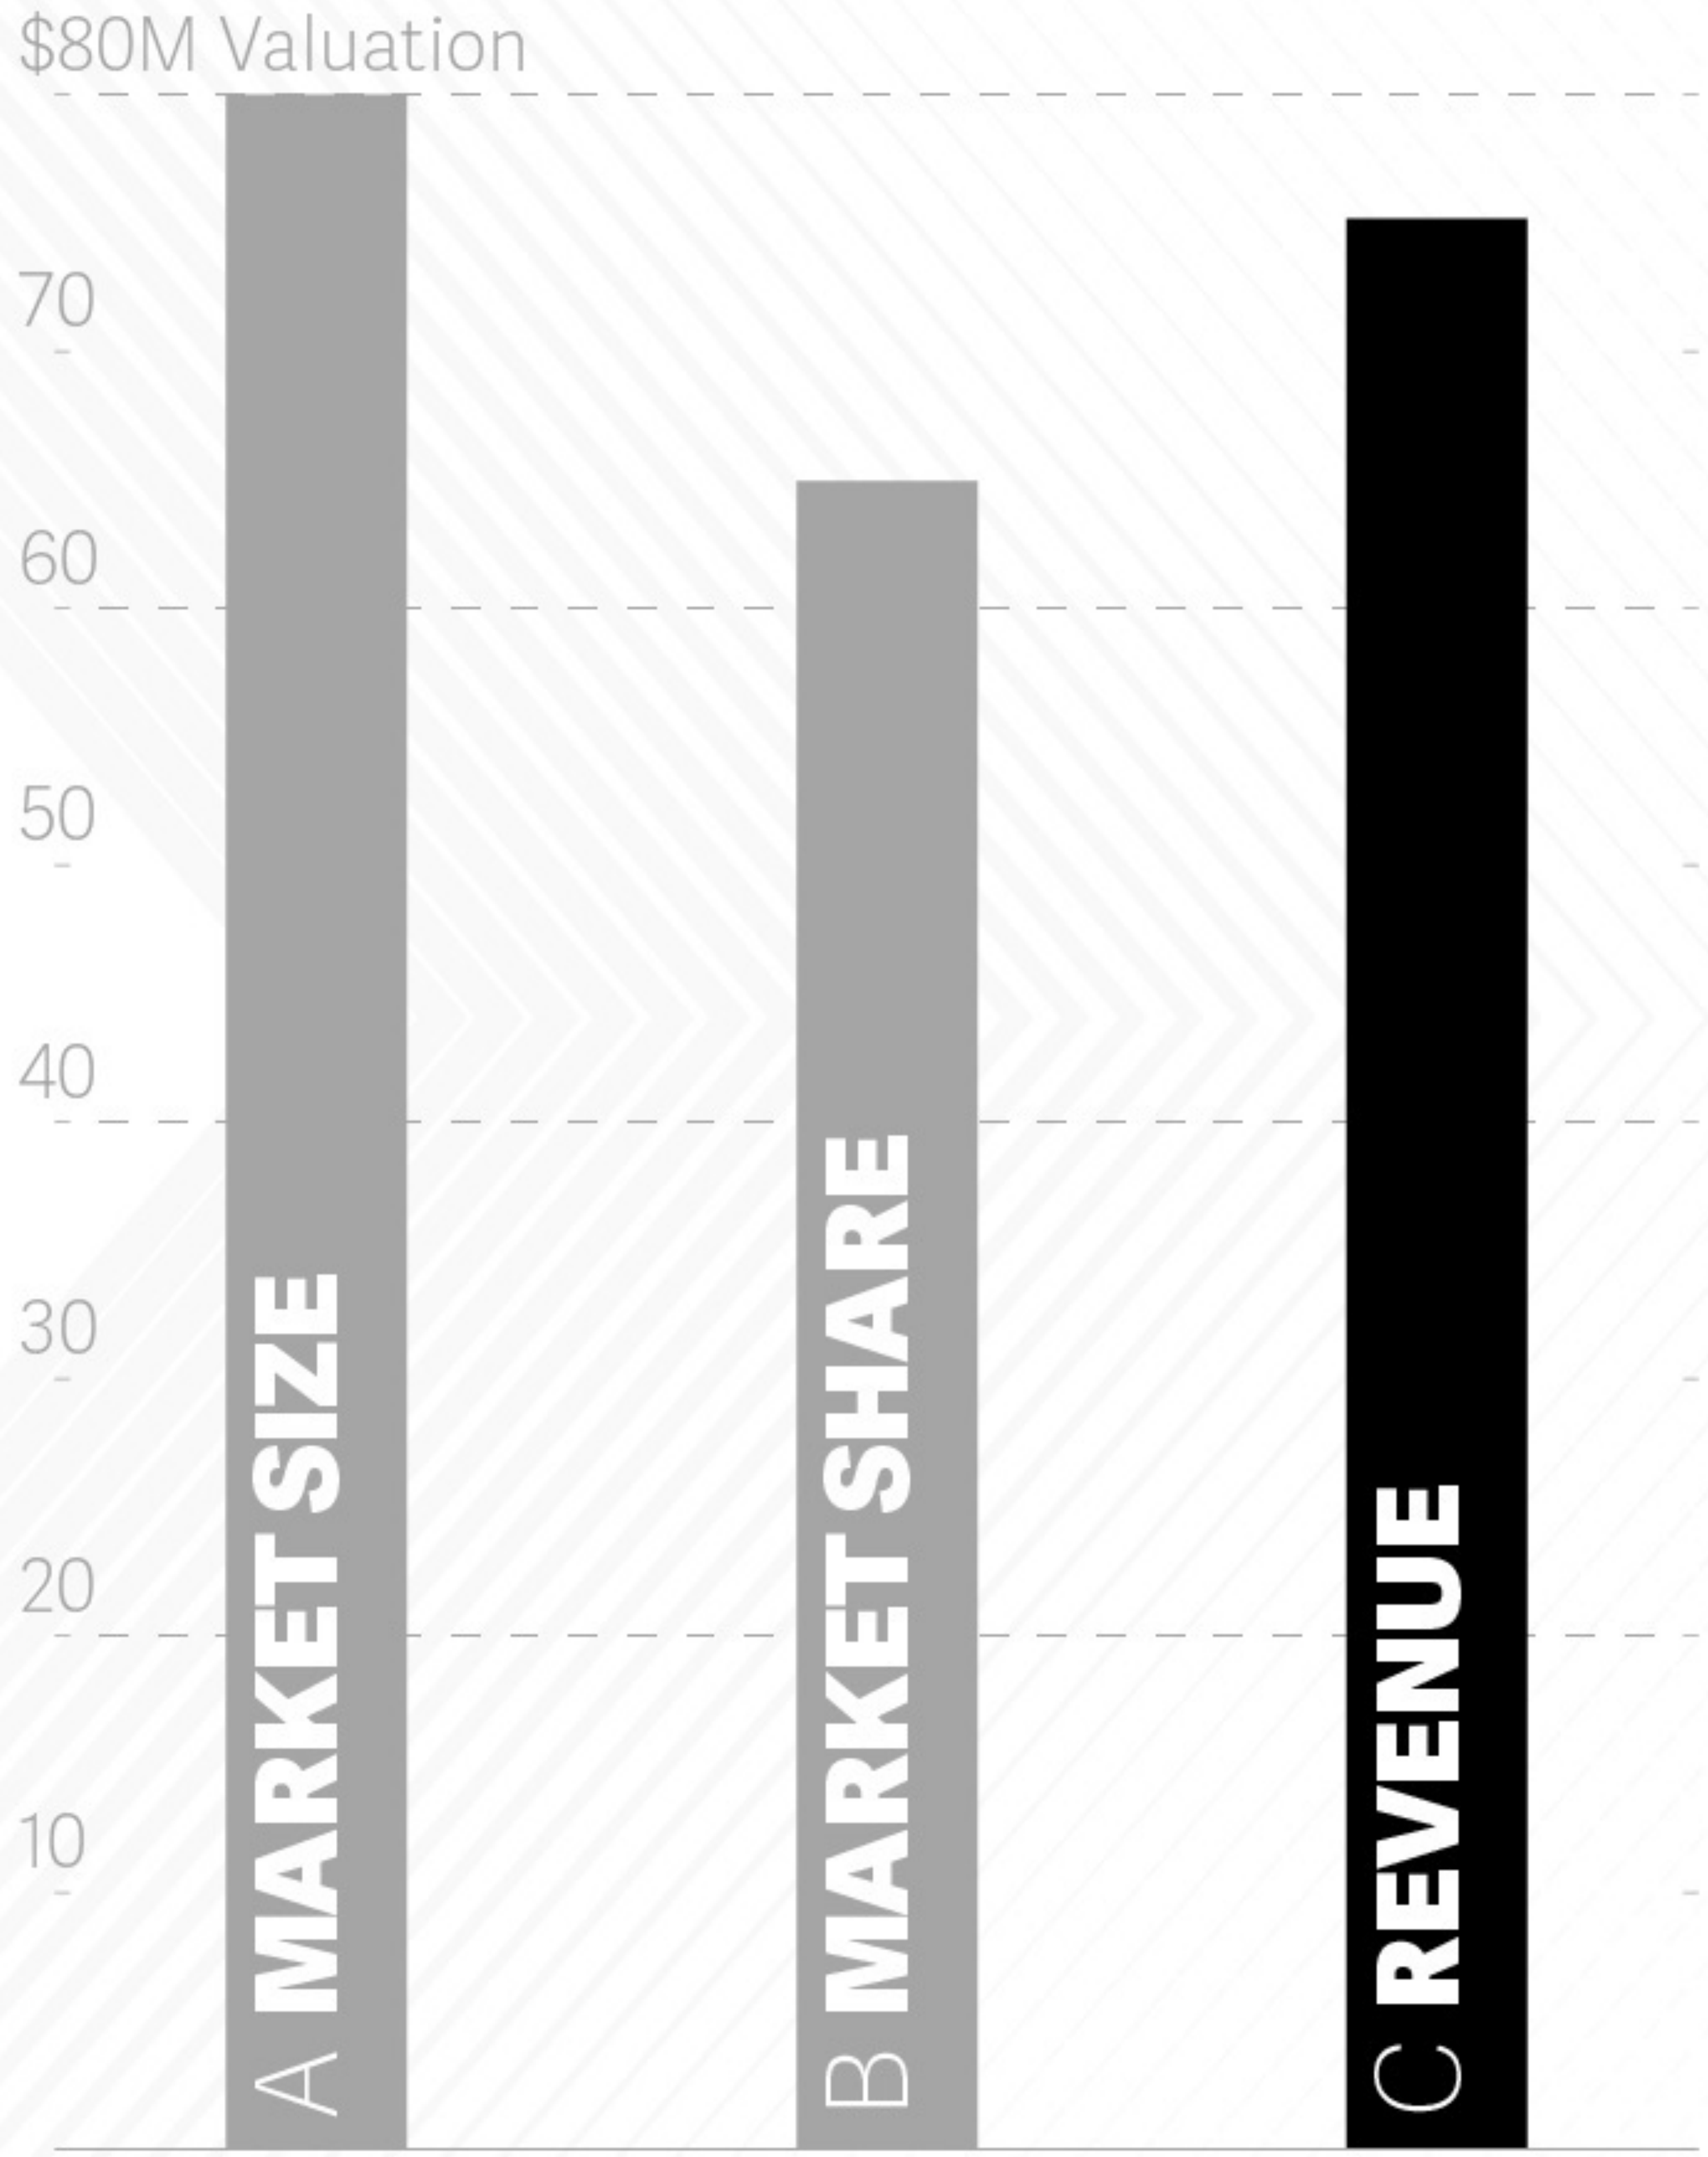
- Spryfi targets liquidity providers (LPs) on Ethereum and EVM-compatible chains.
- Aims to capture significant early adoption in market segments dissatisfied with static fee AMMs and impermanent loss risks.
- Primary competitors include Uniswap V2/V3, Bancor, Curve Finance, and Balancer.
- Spryfi's innovative dynamic fee model and uniform liquidity pool provide a competitive edge to increase market share.



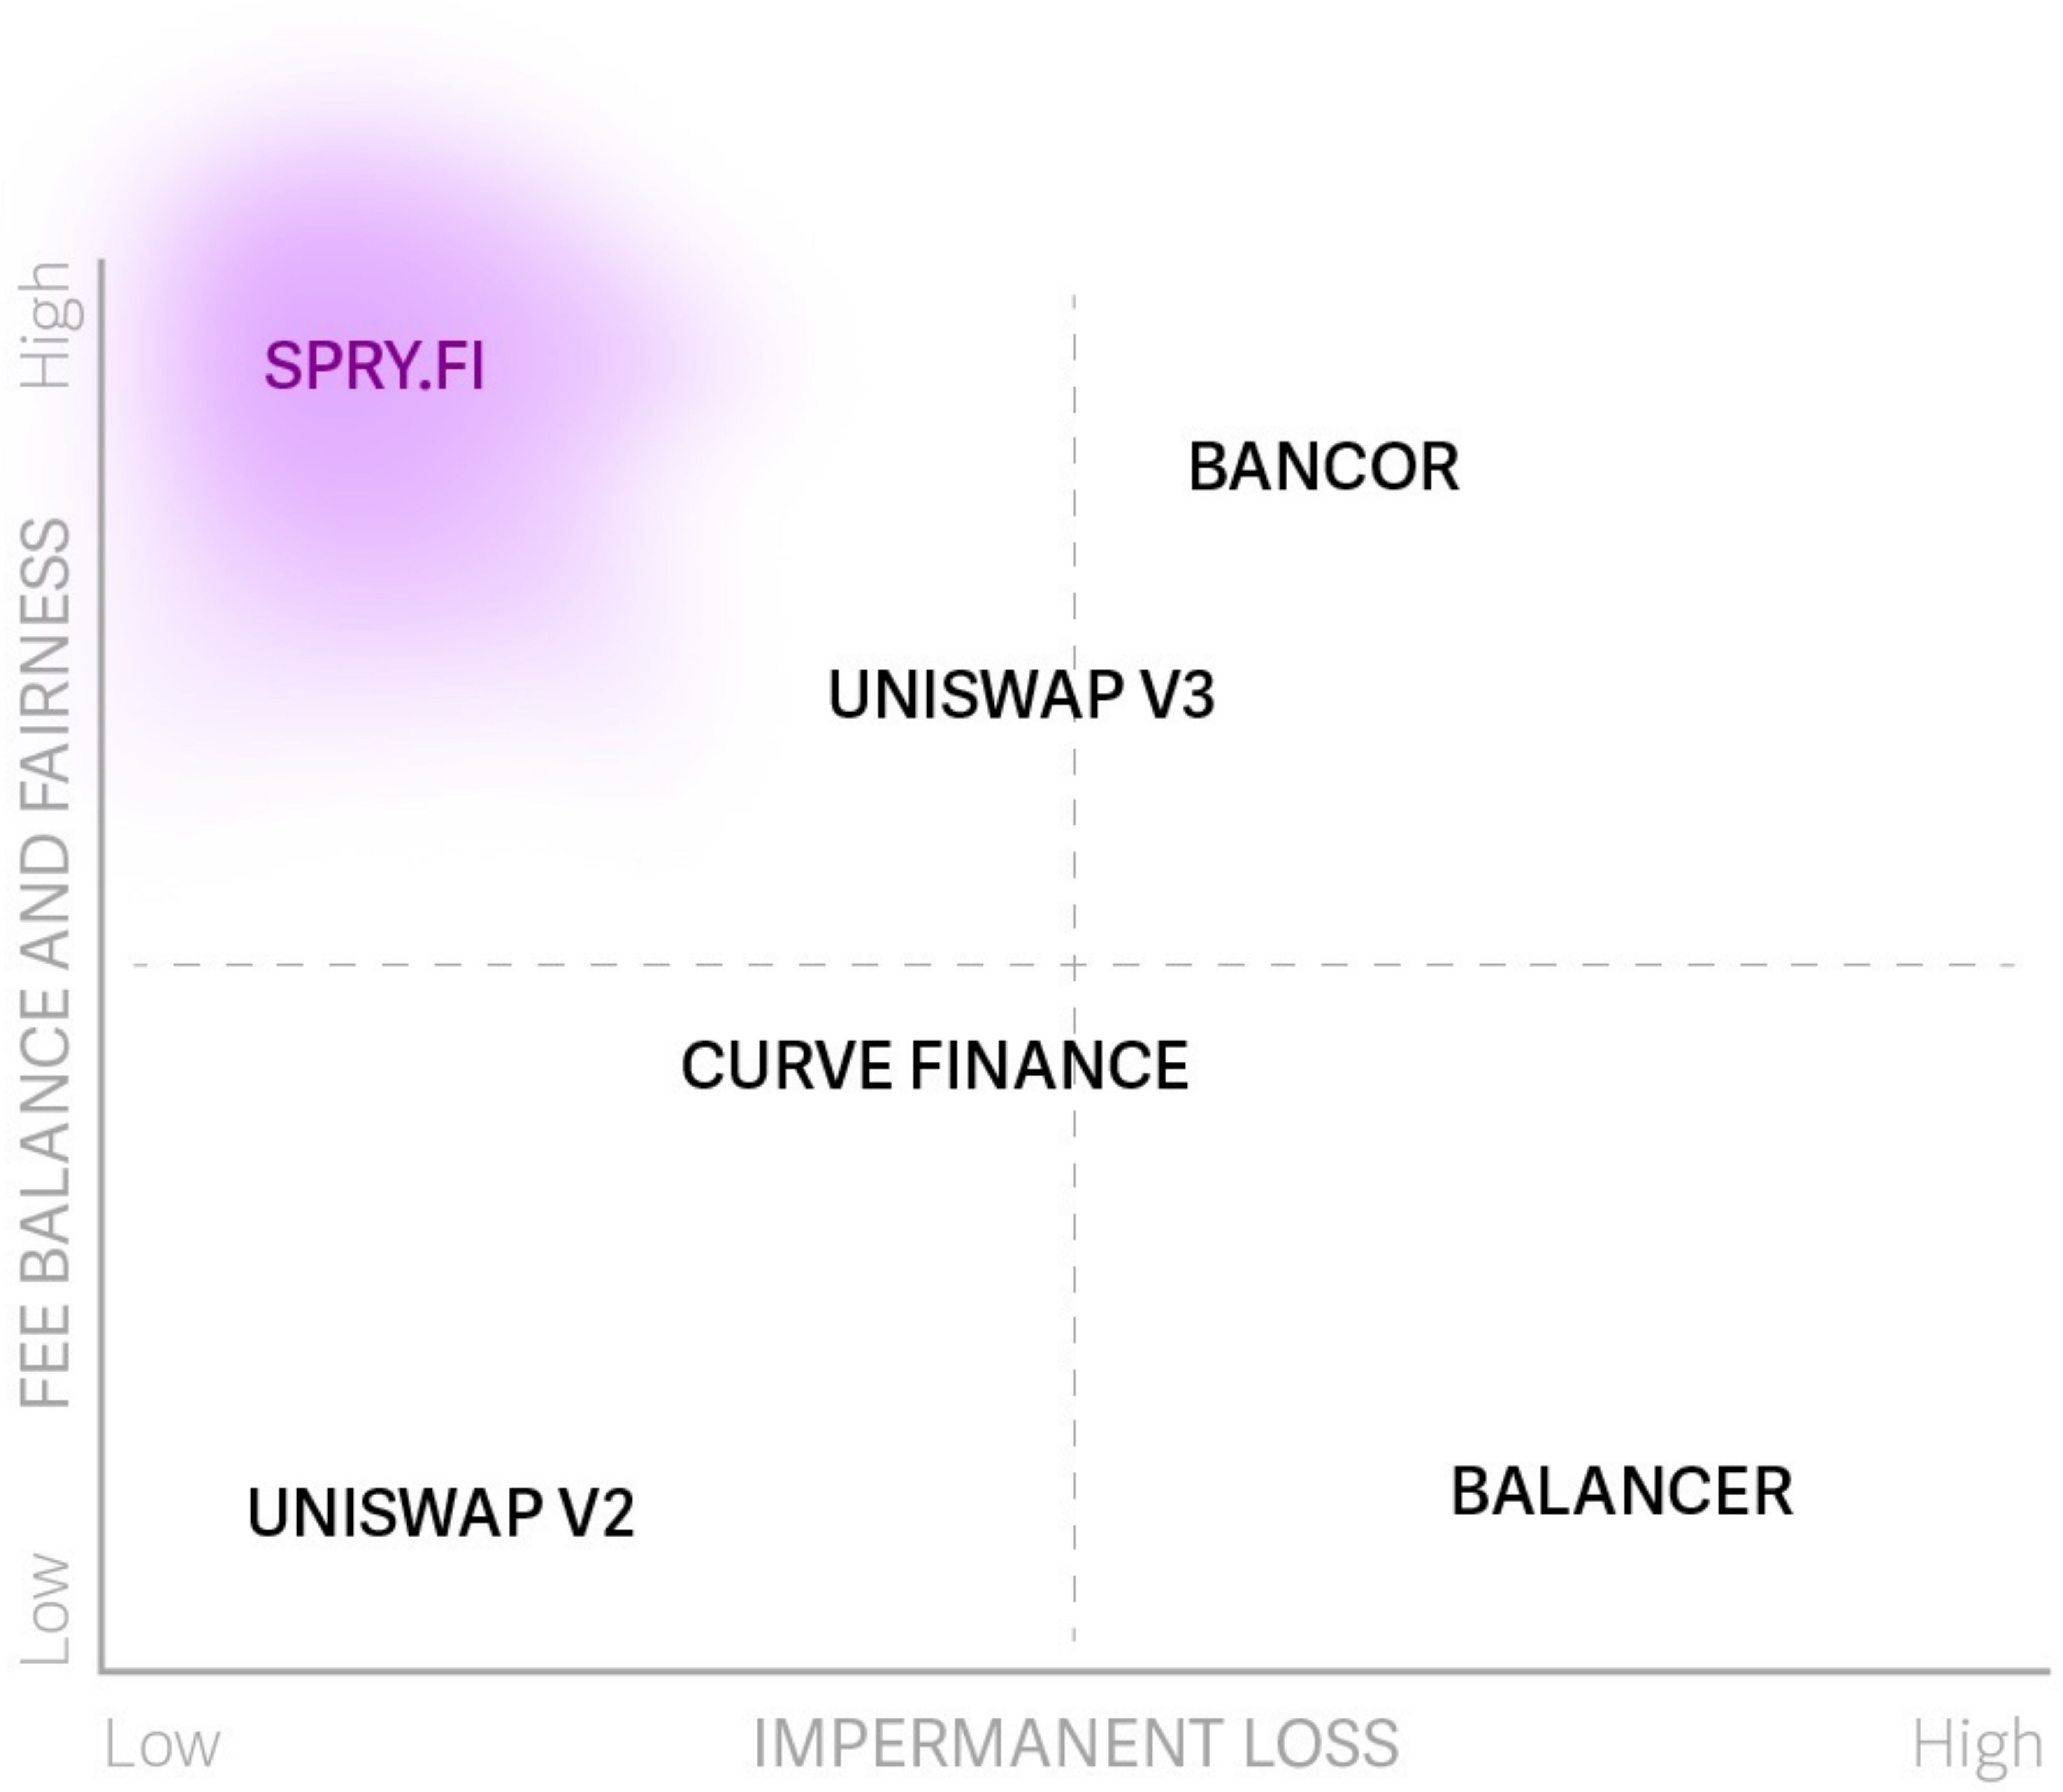
09 **MARKET OVERVIEW**

C **REVENUE**

- Revenue is generated from transaction fees dynamically adjusted between 0.3% and 5.5%, linked to market volatility.
- Growing trading volumes and improved LP retention are expected to boost fee income sustainably.
- The scalable business model allows expansion to multiple blockchains, which can further increase revenue streams.



10 **COMPETITION**



10 COMPETITION

	COMPETITOR	IMPERMANENT LOSS REDUCTION	FEE MODEL FAIRNESS (DYNAMISM)	LIQUIDITY MODEL	EASE OF INTEGRATION	MARKET ADOPTION	UNIQUE SELLING POINTS (UPS)
	Uniswap V2	Low	Static	Uniform Liquidity	High	Very High	Proven, Simple, Highly adopted
	Uniswap V3	Medium	High (Concentrated Liquidity Dynamic Fees)	Concentrated Liquidity	Medium	Very High	Concentrated liquidity, Fee tiers
	Bancor	Medium-High	Medium-High(IL Protection + Dynamic Fees)	Uniform Liquidity	Medium	Medium	IL protection, Dynamic f ees
	Curve Finance	Medium	Low-Medium (Mostly Static Fees)	Stablecoin focused Pools	Medium	High	Low slippage for stablecoins
	Balancer	Low-Medium	Low (Mostly Static Fees)	Multi-asset Balanced Pools	Medium	Medium	Multi-token pools, customizable weights
	SPRYFI	High	Very High (Smart Dynamic Fees)	Uniform Liquidity	High	Emerging	Smart dynamic fee algorithm, significant IL reduction, easy fork

11 BUSINESS MODEL

- **Revenue Model:** Fees collected from liquidity takers, dynamically adjusted based on price volatility.

- **Pricing:** Based on transaction volumes and volatility; scales from 0.3% to 5.5% per trade.

- **Go-To-Market:** Target early LP adopters in Ethereum DeFi; partnerships with existing DEXs; community engagement; pilot projects.

- **Scalability:** Replicable model for other blockchains supporting AMM forks.

- **Path to Profitability:** Growing trading volume + optimized fee capture, with LP participation incentivized by lower loss risks, leads to sustainable fee revenue.

12 **FINANCIAL**

12 **FINANCIAL**

- **6-12 months:** Pilot growth and initial revenue from fees.
- **3-5 years:** Scaling to multiple chains and growing user base.
- **Revenue driven by growing trading volumes and dynamic fees.**
- **Unit economics improved by better LP retention and fee optimization.**
